ABSTRACT

Tourism village is a rural areas that offer a whole atmosphere that reflects authenticity of the country side and has a potential for the development components of tourism. The lack of information of this tourism village makes visitors hardly to access this place and it makes the tourism village that is worth to visit can not be used as much as possible. To build this system information author uses waterfall system development method with the help from PHP programming language, MySQL database and google maps javascript API. With this website of desa wisata in central java province with a concept of geography information system, author expects to help user to obtain valid and efficient information and also can add the number of visit in the tourism village.

Keywords: Website, Tourism Village, Geographic Information System, Google Maps Javascript API and PHP
