ABSTRACT

The existing cashier system is still using the manual system so that problems such as the wrong writing by the officer, the data lost due to not the officer in the data processing, the wrong report because the number of data processed so that not yet maximal in the way handling. This application is built using Visual Basic programming language and MYSQL Server. The reference material of the data source is obtained through interview, observation, and literature study. The design of this system uses waterfall modeling which at each stage of system development has a clear and sequential structure. With this application, is expected to facilitate the process of payment transactions and data processing at MI CASA Restaurant & Karaoke.
