ABSTRACT

Which is currently in the stage of the modern era today, where evaluation and education is important in building work discipline between schools with parents of students by utilizing electronic systems such as internet or computer networks. The problem with the school is the lack of information facilities to the parents of the students who are still using the invitation paper from the school that should be brought by the students to be informed to the parents of the students to attend school. The process of accumulating data evaluation and education less than the maximum and less efficient. This research method uses data collection research method, field survey research and literature study. Field surveys include observation, interviews, and documentation. System development method used is Waterfall method. The system is built using PHP programming language, MySQL. Plans are being implemented with the Unified Modeling Language (UML). The purpose of this writing is the result of a computerized evaluation and educational information system, has a standard rules in the process of program development and in the absence of dependence between parts of the system with each other so easy to maintain and develop.

Keywords: Evaluation, education, information system, waterfall
