ABSTRACT

Payroll data processing system at PT. Unitedtronik Perkasa Sejahtera still very simple. Employee data every month is still recorded in Microsoft Excel, and to submit proof of salary report is still conventional. The problem that arises is the inconsistency of data that can cause the data presented is not valid, if in the search data takes a very long time because it still uses a conventional system, and data security was still not guaranteed, If there is a data search takes a very long time because it still uses conventional systems, and data security is still not guaranteed. The purpose of this final project is to produce an application program to process payroll data on PT. Unitedtronik Perkasa Sejahtera. While the benefit is to accelerate the process of preparing monthly payroll reports from manual system to computerized system that will facilitate the work and process payroll employees quickly and on time. The method used is interview method, literature study, system analysis, system design, Implementation, Verification, and Maintenance. From the research conducted is expected to generate payroll system employees who can assist in the monthly salary report, especially for PT. Unitedtronik Perkasa Sejahtera.
