ABSTRACT

STIKes Karya Husada Semarang, located at Jl. Kompol R. Soekanto No. 46 Semarang. It is a Health Institution, which has various types of goods. In the recording of goods to be in inventory is still difficult. Especially when the goods in the inventory consists of various types. One of the problems that often arise in the Inventory of Goods is not knowing the goods are found in every room. Therefore, the use of Good Inventory Information System is expected to reduce the difficulty in inventory of goods, as each type of goods has been classified regularly and allows for review at any time. To facilitate the inventory process of goods, the authors make the design and build a Goods Inventory Information System by using Visual Studio 2013 as the design of its design and PHPMyAdmin as the database manager and waterfall model as system development method. The end result of this application is to produce a system that facilitate in the inventory of goods in STIKes Karya Husada Semarang
