ABSTRACT

Goods worthy according to the big dictionary Indonesian has a sense of goods that are still worth using. The present society in relation to the improvement of the welfare of many goods that are not used for use but for some people are not used for reasons such as things can buy better. For example, clothes, school uniforms, shoes, bags, bikes, reading books and other items. The amount of goods that have not been used for a more capable society would cause its own problems one of which the room becomes narrow and even goods that are still worthy to be disposed of with useless. With the above problems can be made based on android application system to support the community in knowing the social institutions are willing to accept goods worth using so that people do not need to go to send goods worthy to the social institutions in need. The application was named Application Information Donors and Appropriate Goods Distributor Using Android.

Keywords: Android, Goods Use, Donors
