## ABSTRACT

PT. XI.Axiata in the city of Semarang has problems in managing data tower archives which are still manual and have not implemented information technology. It can be seen that every employee wants to borrow data files, it is often difficult to find data because the data search process is still not smooth, so it will take time while the file is needed. To overcome this problem, the author wants to create a system using the waterfall model system development method, which stages include Requirements Analysis and Definition, System and Software Needs, Implementation and Testing (implementation, integration and system testing, testing, operation and maintenance). This method was chosen because the system development process is carried out sequentially starting from requirements to maintenance. In addition, the authors also make a system design using UML (Unified Modeling Language) in the form of use case diagrams, class diagrams, activity diagrams, and sequence diagrams that can be used to solve these problems. The final result of this research is a website-based document archive management information system of XL Axiata tower in Semarang city. It is hoped that this system can help and facilitate XL Axiata to manage data towers that are scattered in the city of Semarang so that data management can be more effective.

## ABSTRAK

PT. XL Axiata di kota Semarang ini memiliki permasalahan dalam pengelolaan arsip data tower yang masih bersifat manual dan belum menerapkan teknologi informasi. Hal ini terlihat setiap pegawai ingin melakukan peminjaman berkas data tower sering sulit untuk menemukan data karena proses pencarian data masih bersifat manual sehingga akan memakan waktu sedangkan berkas tersebut dibutuhkan. Dalam mengatasi masalah ini penulis ingin membuat sistem dengan menggunakan metode pengembangan sistem model *waterfall* yang tahap-tahapnya meliputi *Requirement Analysis* and *Definition*, *System and Software Needs*, *Implementation* and *Testing* (implementasi), *Integration and System Testing* (pengujian), *Operation and Maintenance* (perawatan). Metode ini dipilih karena proses pengembangan sistem dilakukan secara urut mulai dari analisa hingga *maintenance*. Selain itu, penulis juga membuat rancangan sistem menggunakan UML (*Unified Modelling Language*) berupa *use case* diagram, *class* diagram, *activity* diagram, and *sequence* diagram yang dapat digunakan untuk mengatasi masalah tersebut. Hasil akhir dari penelitian ini merupakan sistem informasi pengelolaan arsip dokumen tower XL Axiata Kota Semarang berbasis *website*. Diharapkan dengan adanya sistem tersebut dapat membantu dan mempermudah pihak XL Axiata untuk mengelola data tower yang tersebar di kota semarang sehingga pengelolaan data tower dapat lebih efektif.

Kata Kunci : Tower Telekomunikasi (BTEC, PHP dan MySQL, Waterfall).
